PROFESSIONAL SUMMARY

MERN Stack Developer with 2+ years of experience designing, developing, and deploying scalable full-stack web applications using MongoDB, Express.js, React.js, and Node.js. Skilled in building secure REST and Web APIs and FHIR APIs, JWT and OAuth 2.0 authentication, third-party integrations (AWS S3, Azure, Adobe Acrobat Sign, Razorpay, Encoded Payment Gateway, and other payment gateways), and Dockerized microservice deployments in Agile teams. Experienced with both MySQL and PostgreSQL relational databases, and proficient in leveraging AI-assisted development tools such as GitHub Copilot, OpenAI Codex, and Claude to accelerate delivery. Proven track record delivering production healthcare applications end to end.

TECHNICAL SKILLS

Frontend: React.js, Redux, JavaScript (ES6+), Material UI, Tailwind CSS, Bootstrap, HTML5, CSS3, Responsive Web Design

Backend: Node.js, Express.js, RESTful APIs, Web APIs, FHIR APIs, Microservices, PHP

Databases: MongoDB, Mongoose, MySQL, PostgreSQL, Schema Design, Query Optimization, Indexing

Authentication & Security: JWT, OAuth 2.0, Role-Based Access Control (RBAC), Secure API Design

Cloud & DevOps: AWS S3, Microsoft Azure, Docker, CI/CD, Git, Bitbucket

Payments & Integrations: Razorpay, Encoded Payment Gateway, Adobe Acrobat Sign, Firebase Cloud Messaging

AI-Assisted Development: GitHub Copilot, OpenAI Codex, Claude

Tools & Practices: Postman, Jira, VS Code, Agile/Scrum

WORK EXPERIENCE

Associate Software Engineer | Hale HealthCare IT Labs, Bhubaneswar | Jul 2024 – Present

- Developed and maintained scalable full-stack healthcare web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js), serving multiple user roles in production.
- Designed and built REST and Web APIs, as well as FHIR APIs, in Node.js/Express.js for OpenEMR (EHR) integration, enabling seamless interoperability of patient data across systems.
- Implemented secure authentication and authorization using JWT and OAuth 2.0 with role-based access control (RBAC).
- Integrated Adobe Acrobat Sign for e-signatures, AWS S3 for secure document storage, Razorpay, Encoded Payment Gateway, and other payment gateways, and transactional email services.
- Deployed and managed application services on Microsoft Azure alongside AWS, supporting cloud-based hosting and scalability.
- Optimized MongoDB, MySQL, and PostgreSQL schemas, indexes, and queries, improving API response times and report performance.
- Dockerized backend services to standardize development and deployment environments across the team.
- Adopted AI-assisted coding tools including GitHub Copilot, OpenAI Codex, and Claude to speed up development, reduce boilerplate, and improve code quality.
- Collaborated in Agile/Scrum sprints using Jira, participating in sprint planning, code reviews, and estimation.

Software Engineering Intern | Hale HealthCare IT Labs, Bhubaneswar | Dec 2023 – Jun 2024

- Built responsive frontend interfaces with React.js, Material UI, and reusable component architecture for web and mobile-facing platforms.
- Developed backend REST and Web APIs and database models (MongoDB, MySQL) powering web and mobile applications.
- Integrated frontend components with backend APIs, implementing state management, form validation, and API error handling.

- Performed debugging, unit testing, and performance optimization across the full stack, reducing recurring production bugs.
- Contributed to end-to-end full-stack feature development and bug fixes using Git and Agile workflows.

PROJECTS

Consent Management System (MERN, OpenEMR, AWS S3, Azure)

- Built a digital consent management platform with Admin, Patient, and Practitioner roles using React.js, Node.js, Express.js, and MongoDB.
- Developed a responsive React UI with Material UI and implemented role-based access control (RBAC).
- Integrated Adobe Acrobat Sign and AWS S3 for secure e-signature workflows and document storage; connected to OpenEMR via FHIR APIs.
- Dockerized backend services and deployed to Azure for consistent, scalable deployments.

Food Ordering Application (Node.js, Razorpay, FCM)

- Engineered backend modules for ordering, payment processing, notifications, invoice generation, and background jobs, supporting both web and mobile platforms.
- Integrated Razorpay and Encoded Payment Gateway for payment processing, plus Firebase Cloud Messaging (FCM) for real-time push notifications.
- Extended REST and Web APIs and refactored database schemas to serve both web and mobile clients; Dockerized backend services.

Mentoring App (Full Stack, MySQL, PostgreSQL)

- Developed and maintained web application features, custom popups, and advanced search functionality across modules.
- Optimized report performance via database indexing and SQL query optimization across MySQL and PostgreSQL; managed schema updates and data migrations.
- Configured Docker-based development environment and collaborated via Git, Bitbucket, and Jira.

EDUCATION

B.Tech in Information Technology | Kalinga Institute of Industrial Technology (KIIT), Bhubaneswar | 2024 | GPA: 8.72/10

CERTIFICATIONS

- Full Stack Development using MERN Stack – Katalyst Consortium Pvt. Ltd.
- JavaScript (Basic), SQL (Basic), Problem Solving (Basic) – HackerRank
